

Pre AP/Honors Chemistry of the Earth's Systems

Chemistry of the Earth's Systems is a rigorous lab science class based on the Next Generation Science Standards (NGSS). In this class, students deepen their understanding of chemical systems on Earth. NGSS performance expectations will be implemented three-dimensionally to integrate science and engineering practices, crosscutting concepts, and disciplinary core ideas through the concepts of: Atoms and bonding, elements, chemical reactions, bio-geo-chemical cycles, and the chemistry of human impact.

Course ID# = CHEM-HN-Y

**(This course meets the following: 1 of 2 needed Lab Science Credits, or
1 of 3 Science Credits)**
